Professional Summary

Final-year Computer Science undergraduate specializing in Artificial Intelligence and Machine Learning, with hands-on experience building AI-driven and data-backed applications using Python, SQL, React.js, REST APIs, Flask, and machine learning. Experienced in developing end-to-end applications, integrating frontend and backend services, designing database-backed workflows, and applying machine learning to real-world data. Interested in LLM applications, AI agents, intelligent workflows, and building practical AI-powered products.

Internship Experience

Web Development and Software Testing Intern - Torsecure Cyber LLP

Jun 2026 - Jul 2026

- Performed functional and end-to-end testing of web applications to identify defects, usability issues, and workflow inconsistencies before deployment.
- Documented, categorized, and tracked application bugs, helping the development team prioritize fixes and improve release quality.

Projects

AI-Powered Career Guidance Web Application

React.js | SQL | REST APIs | Machine Learning

- Developed an AI-driven web application that analyzes user skills, interests, and academic information to generate personalized career recommendations.
- Designed and queried relational datasets using SQL to structure and retrieve user information for the recommendation workflow.
- Integrated the React.js frontend with backend services through REST APIs, enabling users to submit profile data and receive automated recommendations.
- Applied machine learning and rule-based decision logic to support an automated recommendation pipeline for career guidance.

AI-Based Pattern & Sentiment Detection System

Python | Pandas | Scikit-learn | NLTK | Flask

- Built a Python-based AI application for analyzing online review data to identify sentiment patterns and potentially deceptive behavior.
- Implemented data cleaning, text preprocessing, exploratory analysis, and feature preparation using Pandas and NLTK.
- Developed and evaluated supervised machine learning classification models using Scikit-learn to detect behavioral and sentiment patterns.
- Integrated the machine learning pipeline into a Flask-based application to expose model predictions through a usable software interface.

Education

B.E. in Computer Science and Engineering - Artificial Intelligence & Machine Learning

AJ Institute of Engineering and Technology

2023 - Present

CGPA: 8.0 / 10

Over 6 semesters

Technical Skills

Programming: Python, SQL

AI & Machine Learning: Machine Learning, Scikit-learn, Pandas, NumPy, NLTK, Exploratory Data Analysis, Data Cleaning & Preprocessing, Prompt Engineering

Databases: MySQL, PostgreSQL, DBMS, Relational Database Design

Web Development: React.js, HTML5

Tools: Git, GitHub, Figma, Power BI,

Certifications

Google Business Intelligence Professional Certificate

Google Data Analytics Professional Certificate

NPTEL - Database Management Systems

NPTEL - Machine Learning
